

Virtual Border

Do you feel safe?

Rapid escalation of globalization and technology are causing increased security threats in everyday life no matter of the country or location.

Recent events have led us to recognize these security problems and which consequences they can have for people or assets.

Old way of registering visitors in paper logbooks does not offer adequate security level for addressing these challenges.

Therefore, role of technology and new innovative software solutions in security have never been more required to protect your employees and visitors.

**“Virtual Border provides
unique working tool
for security department”**

Virtual Border is a software solution designed for the quick and accurate identification of visitors in facilities with a high frequency of guests or a high level of safety requirements.

Virtual Border replaces traditional log books by reading and recording all data from personal documents and controls the access of each individual according to security regulations of the facility.

On the entrance, this user - friendly software solution enables security guards to do the entire entry procedure in several seconds.

The process includes scanning and reading personal documents, writing visit details, assigning visitor badges and recording entry snapshots.

In the back office, supervisor can see all the visitors who have entered or left the site as well as perform security checks of those visitors prevented from entering the site.

The system generates various reports and statistics which provide accurate details important for your facility.

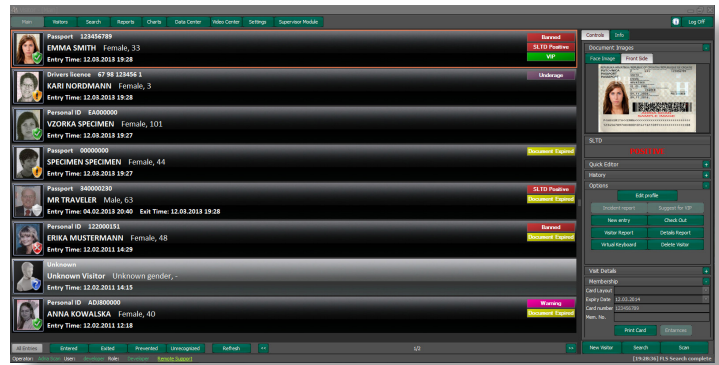

WHY

- Speed up entry procedure
- Increase security level
- Get full overview of visitors
- Have a evacuation list
- Digitalize entry log books
- Create statistics and reports

Safety is everybody's concern

Virtual Border offers various modules, depending on actual needs and security requirements of the facility.

Our experts are continuously developing and implementing carefully designed features which ensures our clients to be one step ahead of increasing security risks.

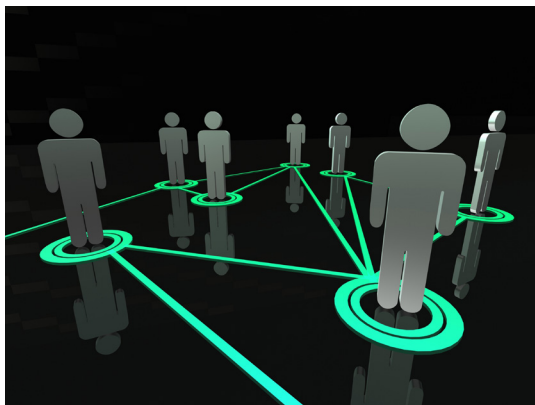

<p>Basic Module (Client)</p>	<p>Contains visitor gallery with document images and personal details, entry and exit time records, incident report option, etc. Additional features like evacuation report, notices for arriving problematic visitors, daily overview, visitor history reports are also available.</p>
<p>Scan Module</p>	<p>Enables automatic transfer of textual data and images from personal and travel documents into database. It uses high speed scanning devices and reads more than 2000 personal documents worldwide (ID Cards, DL's and passports).</p>
<p>Supervisor Module</p>	<p>Used by security managers for monitoring visitors and managing their profiles. It provides real time preview for all visitors entering or leaving the facility. Module contains additional features like blacklist, reports, charts, visitors archive, administration, etc.</p>
<p>Access Control Module</p>	<p>Enables set of features to perform standard check-in and check-out process in a few seconds. Module supports reading proximity cards, fingerprints, assigning badges by visit purpose (visitor, contractor, employees), select visit destination, write visit notes, etc.</p>
<p>Video Module</p>	<p>Enables streaming, recording, archiving and viewing videos from existing CCTV system or standalone IP or HD web cameras. Automatic snapshots or video recording are available for check-in and check-out process.</p>
<p>E-Mail Module</p>	<p>Enables e-mail notifications about various events which can be sent to supervisors, hosts or group of recipients. Notifications can be sent when visitor arrives, blacklisted or problematic person tries to enter the facility, some incident occurs etc. Various daily reports can be sent to the managers.</p>
<p>Access Control Integration</p>	<p>Virtual Border is interfaced with several leading access control systems. Together they create complete solution for monitoring and tracking visitors in any facility. Integration contains features like exchanging visitor details, badge numbers, access levels, host information, etc.</p>

"We specialize in developing and implementing software solutions for identifying people, verifying identities and managing this information in various fields to enhance the business.

Our software solutions are based on the most innovative ideas and the latest technologies that ensure faster business processes, enhanced business quality and the highest security standards for our customers.

Adria Scan clients include organizations in the field of security, finance, telecommunications and hospitality. Our products are used in more than 50 countries around the world.

Adria Scan team continuously cooperate with security experts in creation of most advanced security solution which incorporates latest state of the art technologies."
